NETWORK & SECURITY TECHNOLOGIES OFFERS
SecureNET™ CONSULTING SERVICES
COMBINING NETWORK AND SECURITY CONSULTING

SecureNET™ Offerings to Address Growing Market

PEARL RIVER, NEW YORK (April 15, 2003) - Network & Security Technologies, today announced it has integrated network and security offerings for an end-to-end solution that addresses the network security infrastructure of both enterprise and service provider clients. The Network & Security Technologies SecureNET™ consulting services are designed to provide a complete security infrastructure to ensure secure, reliable access to network resources for customers, suppliers, vendors, and employees.

Network & Security Technologies has introduced SecureNET™ services to help customers plan, deploy, and oversee secured networks. The SecureNET™ consulting package has three networking and three security modules. Networking services include network and security assessment, design and implementation consulting. SecureNet™ offers an overall evaluation to identify and prioritize existing and potential security breaches.

"The increased reliance on corporate networks as a business enabler has revolutionized the way we do business. It places a significant burden on those charged with ensuring the availability of data while protecting confidential information," said Adam Lipson, President and Chief Executive Officer of Network & Security Technologies. "Businesses recognize the importance of their networks as the vehicles on which their businesses operate. They can ill-afford to have these paths unavailable and not secure. Network & Security Technologies has developed SecureNET™, which combines network and security consulting solutions to provide clients with the tools necessary to ensure the availability and security of their corporate networks."

The Industry

The reliance upon the Internet and e-commerce, coupled with the increased popularity of telecommuting, introduces a new hurdle for companies that need to ensure the protection of critical information. Security breaches can compromise private information such as credit-card data and may take companies out of business by disabling Internet sites. Keeping in mind that most breaches are not reported, security threats from hackers, disgruntled employees, "cyber terrorists", and corporate or government "moles" cost companies that reported their losses \$27.1 million this year, which is twice as much as the previous year, according to the most recent CSI/FBI Survey.

To combat these threats, companies are installing security measures to ensure that confidential

information is kept private and their Web sites remain functional. Forrester Research estimates that worldwide security spending will increase by 55% in the next two years, and that U.S. spending alone will grow to \$19.7 billion in 2004.

Network & Security Technologies Solutions

Network & Security Technologies developed the SecureNET™ solution to further address the growing security burden placed on corporate IT departments. Crossing into both network and security domains, SecureNET™ creates a network infrastructure that enables clients to implement the most effective security technologies for their particular business needs. The result is an end-to-end business infrastructure that minimizes security vulnerabilities, increases the effectiveness of the infrastructure, and improves the efficiency of security response procedures. Designed for sequential delivery, SecureNET™ network consulting services include Network Assessment, Network Design and Network Implementation with an emphasis on Security Assessment, Security Policy and Procedure, Security Design, Security Implementation and Ethical Hacking. The benefits to clients include maximized availability of their infrastructure, minimized network vulnerability and risk, delivery of consistent and relevant security measures and improved intrusion response procedures.

About Network & Security Technologies

Network & Security Technologies is a professional services firm specializing in the architecture, design, planning and implementation of highly available, secure networks, Internet's, and Intranet's for enterprise and service provider clients. Network & Security Technologies' premiere product, SecureNET™ consulting solutions leverage world-class expertise in network architecture and design, security and network assessment, ethical hacking, policy development as well as project/program management. Headquartered in Pearl River, NY, USA, Network & Security Technologies offers a modular, sequential, scalable and comprehensive set of internetworking and security consulting solutions for corporate and service provider clients.
